Course Outline

This advanced Revit course is designed for Interior Designers and Architects who have completed beginner and intermediate training and are ready to integrate interior design documentation into a coordinated architectural model. Through hands-on projects, students will develop the tools to model, annotate, and present fully detailed residential and commercial interior spaces. Emphasis is placed on creating and managing interior-specific templates, custom families, material libraries, finish schedules/ legends, and presentation views. The course culminates in two comprehensive interior design drawing packages—a multi-family living unit and a fitness center—focusing on accurate modeling, documentation standards, and visual presentation techniques aligned with professional practice.

Student Learning Outcomes & Objectives:

- Collaborate effectively with linked architectural models in a multi-discipline Revit Project.
- Customize and manage Revit templates tailored for interior design workflows.
- Model and document detailed interior layouts for residential and commercial interior spaces.
- Create, manage, and apply custom materials and finishes using a centralized material library.
- Produce construction documentation including interior elevations, finish schedules, and legends.
- Render and present high-quality interior views for design presentations.
- Organize Project drawing sets for both print and digital presentation formats.
